

mri3 Module Remote Interface

Leaders in Innovative Protective Systems, Bramco's mri3 are compliant to latest statutory and industry standards. Bramco's Module Remote Interface offers a completely flexible design providing remote access to almost any product in our range, from CPM or mp3 modules to individual relays.

Configurable in any number of styles and to suit any customer requirement, mri3 provides access to your Bramco module through a flameproof window.

In addition, mri3 provides the means to indicate if the module/relay or even an outlet has tripped.

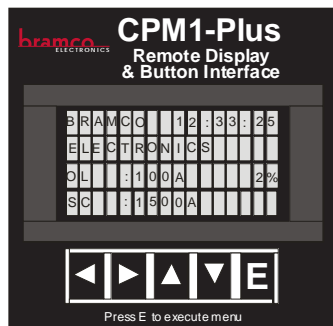

The buttons are large enough to be pushed with gloves on. This will eliminate the need for expensive flame proof buttons to access the remote display.

The mri3 must be installed flush to the glass window of the flame proof box to ensure the best result in responsiveness.

Convenient mounting arrangement is provided at the back of the mri3.

Final dimensions : Adaptable to suit application.

The mri3 comes with a minimum 2 year warranty.
